The 112 rejection of claims 8 and 11 has been withdrawn in view of applicants' amendments.

Newly submitted/amended claims 13-15 and 20-22 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: applicants' are now attempting to claim a method forming an electronic device, which was already restricted out in the first office action, or is restrictable subject matter at this time. The method of forming an electronic device and a method of forming a patterned layer are considered to be distinct inventions, based on their clear differences in that the patterned layer can be used for forming many other devices besides those claimed.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 13-15 and 20-22 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

The 102 rejection based on Xia has been withdrawn in view of applicants' arguments, that the reference fails to disclose an ink removing step.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 6-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Xia et al.

The reference as explained in the previous office action is applied here as such. The reference lacks a final step of removing the ink from the surface of the substrate.

The examiner takes official notice that such a step would have been found obvious to the skilled artisan, for the purpose of obtaining a clean substrate surface, which will be processed further. Such a step appears remedial, particularly in this art; when a mask is no longer needed, it is removed.

Claims 1, 3-12 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Xia et al in view of Biebuyck et al-'259.

The rejection as set forth in the previous office action is deemed proper and therefore maintained, along with the new position established in the above rejection over Xia. New claim 19 is addressed by the Biebuyck reference, see column 10 line 64.

Applicants' argue that since the secondary reference deals with a different method of using the stamp, for applying an etchant or a dopant.

This is found unpersuasive, since that appears to be irrelevant when determining the method of relief geometries on a rotatable roller. Applicants' have failed to establish why this would not have been obvious to one skilled in the art.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
